What does that mean? Does that mean that in an ArrayList when you add two objects they are separated by a link not a different object? In other words if I add a user and a contact to a list what really gets added is a user + a link to a contact? Do two objects in an ArrayList get linked like this? So does an ArrayList only have a single index and not the whole array index? A: ArrayList is a linked list (actually a doubly linked list), but it does not use an array index. So no, if you add a user and a contact to a list, two objects are created. Both are in the same memory address, so they could have two indexes. Follow the author of this article Follow the topics within this article The legendary British comedian, Ronnie Corbett, has died, just days after announcing his retirement due to ill-health. One of the best-loved faces of British comedy, Corbett lived for more than 70 years and many will be stunned to hear of his death. Born in 1937, Corbett was just 12 when he made his first TV appearance in 1954. In 1965 he would launch the UK's satirical sketch show, The Ronnie Corbett Show, which went on to become one of Britain's most successful comedies and an all-time best-seller. His career was crowned in 1982 with a Golden Globe, a BAFTA and a Bafta. Following his retirement in November, the multi-award-winning comedian reportedly said he was "sad", "very unhappy" and "disappointed" with his health after more than 50 years in the entertainment industry. "I'm not much good at goodbyes and I don't want them to come out of my mouth," he told BBC Radio
