

On the other hand, the original preinstalled configuration and packaging is not exactly the same as the one you are currently using. Newer Tablets have USB fast charging feature which we did not list in our previous article. The biggest problem is the serial number is invalid and . May 10, 2019 I have a terrible problem with serial number system information. i.g. i can't change my bios machine type. after booting my system,i follow Lenovo Community support page to re-setup my bios and re-change a lot info.i change my system date,i change serial number,machine type,website & youtube address etc. After that i restart

---

my system but don't correct the serial number. I contact the Lenovo support center to re-create my original . May 1, 2019 The serial number in the BIOS config file is invalid. It is a 6 digit number . It is possible that the serial number is not set in the bios menu . Make sure to update it to the correct serial number. I suggest reading up on the table spec to help with the debugging process. It seems to have the newer serial number. .

Jun 7, 2019 After trying numerous options here is what worked for me. I would start there or at least try this first.

Worth noting though this is in the first steps to a possible solution. You may need to do more work but I'd hope this got you on your way. Check your Model Number in the BIOS E.g: Asus Step 1. Look for the Model Number in the first few menu

---

options. Click Advanced > Model Number > Enter Step 2. If you don't find it there do a reset. Reset the Tablet Press and hold the following: F2: Display Backlight Switch F5: Wlan F6: Lock Now delete the serial number in the bios, use the serial number in Step 3 or try the other ways I described below if it's still not the right serial number. Where is the Serial Number located? How can I view or change the machine type (e.g. 32-bit vs. 64-bit)?
