Troubleshooting Is there some kind of logic issue with the key? Make sure you are using the same version of the key in the autocad licence file and the autocad licence file that you are testing with. If the version in autocad is different from the version you are testing with, you could find yourself with a crack in your licence file and a non valid key. Check for the key file. In the process of making the key, you might have changed the autocad licence file. Check the licence file to see if the key is there. If this is the case you should probably uninstall Autodesk Autocad and redo the whole process. You can have a crack in the licence file. This can happen if you change the licence file and don't remove Autodesk Autocad from your computer. This is quite unlikely, so the error could be on your end. Most likely you are in the licence file and are trying to activate the wrong version of Autodesk Autocad. Activate another version. Try another version and re-activate the key. If this is not the case you might have an error in your licence file. Close the licence file. Clean the file to avoid having a crack in the licence file. Close the licence file.
