Also, the probability of the dying animal being rescued by the \hat{A} .Q: Pandas to.net way of writing? I want to write an equation which I wrote in Pandas to another data structure. `df_new =`
`df.append([df[0].rename(columns={0:'TC',1:'IC'}), 'IC'])` This produces the following output in Pandas: TC
IC 0 1 0 1 2 0 2 3 0 3 4 0 4 5 0 TC IC 0 1 0 1 2 0
