The effects of decanting water-ethanol mixtures on the growth, general ultrastructure, and metabolism of Salmonella typhimurium were studied. Continuous exposure to ethanol inhibited growth but once the ethanol concentration fell below 50 mg/mL, growth resumed. At this stage, the bacteria resembled stationary cells. Compared with continuous exposure, growth under non-continuous or continuous oscillating conditions resulted in an increase of the lag phase and cessation of growth. Continued exposure to ethanol increased the total number of viable cells at stationary phases. A chemostat study indicated that ethanol promoted bacterial growth and cell division by enhancing the affinity of cell membrane receptors for nutrients. However, considerable amounts of ethanol in the cell were found as well. Continuous exposure of the cells to ethanol resulted in a gradual increase of cell density accompanied by cytoplasmic vacuolation, e.g., the formation of osmiophilic vesicles. At a constant ethanol concentration of 20 mg/mL, the cytoplasm of cells attained the maximal osmiophilic vesicle density (Tmax) after 10 h. If the ethanol concentration was then decreased, the Tmax diminished and the bacteria remained at stationary phase. The ability of the bacteria to incorporate methionine decreased gradually with increased ethanol concentration. The amount of cytoplasmic proteins also tended to decrease with increased ethanol concentrations. The ability of S. typhimurium to ferment lactose decreased gradually with increased ethanol concentration. The acetyl CoA concentration increased gradually and then decreased gradually at low ethanol concentrations but decreased immediately as the ethanol concentration was increased. These results show that ethyl alcohol concentrations of 20-70 mg/mL have minimal inhibitory effects on S. typhimurium, but cell physiology deteriorates when these concentrations are raised higher than 70 mg/mL.Q: Oracle package with triggers and FK I have a package for creating triggers that has some FK constraints.
