MDS is a heterogenous group of disorders with a widely variable clinical course. Family histories may be the best prognostic indicator, followed by cytogenetic abnormalities and perinatal complications. Practical aspects of genetic counseling for the MDS patient include a careful evaluation of the family history, including known MDS predisposing genetic conditions. Individuals who have a family history of MDS should be referred for both cell and genetic counseling. Laboratory studies may be indicated on an individual basis depending on the results of the clinical and family assessment. if (mergedIndices.length > 0) { for (unsigned int i = 0; i ID_GetInfo().GetTriangle()->GetTraits(); bool isTriangle = traits->IsTriangle(v); if (isTriangle) { Vec3 n[3], c[3]; traits->GetNormals(n[0], n[1], n[2]);
