The panel is made up of three anthropologists (Dominique StasaÂ . located at 5748 Long Point Road, Cedarville, OH 45317 Â.. 645.836.0124. meelove.com. bpdos.com. Home | Imposition Studio 483 Crack.1. Technical Field of the Invention The present invention is directed to a stereographic projector and, more particularly, to an optical assembly for improving resolution of a stereographic image projected onto a distant viewing screen. 2. Description of Related Art Stereographic projection is an established technique for the presentation of three dimensional scenes in a two-dimensional medium. Conventionally, an input image that represents an object may be divided into a left view and a right view, each view being a projection of respective portions of the input

---

image upon parallel imaging screen surfaces. As such, in a three-dimensional projection, the resulting image corresponds to the object located between the two screen images (left screen and right screen) that form the image. Because of the composite projection of left and right screen images, a stereographic projection is generally considered a more natural depiction than a projection wherein only a single screen image is used. Thus, it is desirable to provide the projection device with an optics system that will compensate for the disparity between the left and right screen images (viewer screen). The magnification of a stereographic image is usually considered desirable, and the resulting image may be presented on a larger, distant viewing screen, thus affording the viewer a perceived sense of realism. For example, an image projector may include an input optical system for receiving and directing the input

---

image to the left and right eye screen images.

The input optical system may include a lenticular lens having a lenticular surface for directing the input image to the left and right eye screens. Additionally, an optical assembly may provide a composite projection of the
