What's New In?

Big Clock Widget is a small utility that will display a large clock on your desktop. Designed to be as easy as possible to use, Big Clock Widget is programmed to be as seamless as

possible. To help you get the most from Big Clock Widget, the application comes with a configuration menu that enables you to set the hours, minutes, and seconds, and change the frame color and opacity. What's new in this version: Version 1.1.0: Added the ability to change the color of the frame. Changed the "Widget Preferences" area in the 'right click menu' to be more intuitive. Improved the frame dragging capabilities. Version 1.0.6: Fixed an issue that

caused some people to lose their work upon login. Fixed a very rare situation where the clock might display "Unavailable" when the server is down. Version 1.0.5: Added the ability to scroll a bit faster. Version 1.0.4: Set the "Widget Preferences" in the 'right click menu' to be more intuitive. Fixed an issue where the widget would not be displayed after launching. Version 1.0.3: Fixed a very rare situation where the clock might display "Unavailable" when the server is

down. Version 1.0.2: Fixed a very rare situation where the widget would not be displayed after launching.

Version 1.0.1: Fixed a very rare situation where the clock would display "Unavailable" when the server is down.

[Prevalence and incidence of mental disorders in a rural population in low-income countries]. To establish the prevalence and incidence of psychiatric disorders in a rural population in low-income countries. Psychiatric epidemiological research

of adult population in rural areas of Zaire (Democratic Republic of the Congo). A cross-sectional study by using cluster sampling with multi-stage and stratification of 12 villages. The sample selection was done in two steps: First, a sampling was made by objective and by selective, based on census, of the population from which sampling was done in a first step. Then a systematic, systematic, random sampling was realized. For the psychiatric diagnosis, the criteria of DSM-IV, of the WHO, of ICD-10,

and of the UCA were used.

Psychiatric assessment was made by means of DSM-IV and I
