I consider this to be part of the library ecosystem, but it should be released eventually. I'll call it nopt, although it's no longer a package manager. Why, you ask? How does something named nopt contribute to Node.js? nopt is a Node.js configuration system that provides extensible shorthands for common arguments in Node.js applications. All it does is provide a set of aliases for common arguments, allowing developers to specify Node.js applications in shorthands, such as the typical opt for optparse. Instead of doing more CLI parsing and parsing over configuration, you just specify it in the CLI's shorthands, and it knows what to do. You could use the CLI's shorthands for more than just configuration, though. We've been doing this for a while and it's called options. This might seem similar to nopkg f30f4ceada
