* **Photoshop Elements (**www.photoshop.com/products/photoshop_elements) is a lower-end version of Photoshop, free for non-commercial use. It has many of the same features as Photoshop, and its tools are available in a compact window. I prefer to use Photoshop Elements for the majority of my image-editing chores. The "Basic" preset is an onscreen help tool that shows the most common Photoshop shortcuts, commands, and features, as shown in Figure 2-2."). Figure 2-2. You access this helpful tool by clicking the Help button in the toolbox, on the top menu bar. The Basic help tips are an onscreen aid to help novice users get started using Photoshop. The easiest way to start working with Photoshop Elements is to use the **Customization** workspace, described on Starting Up. Once you understand how to work with the Customization workspace, you should look at the basic tools and features that are common to all graphic programs, and you'll be ready to start using Photoshop Elements and Photoshop.

It is the digital asset (token) that links the concept of money to a digital blockchain. A digital payment process will utilize a blockchain. The blockchain records transactions in order to prevent counterfeiting, fraudulent activities, and to record their authenticity. In Bitcoin's case, blockchains record every single currency transaction, all of which is verified with a time-stamping process and provided in a ledger that can be downloaded and validated by anyone on the network. There is no central entity that you would have to pay taxes to, like banks, governments, or other social programs. The network can be utilized to record funds, trade, and execute contracts on a decentralized network. There is no single entity that owns, controls or verifies the transaction records, so you can't be attacked by a group of hackers who need to be paid back. Cryptocurrencies are "crypto" or "private" money, meaning it is not tied to a company or government. Cryptocurrencies are generally designed to have transaction fees lower than those of traditional banking or government-issued currency. The lower transaction fees allow for cryptocurrencies to be used for a variety of transactions – from small payments to purchasing a home or a car. There is a market for cryptocurrencies that are worth more than $100 million. The spread of cryptocurrency mining platforms. Image provided by Flickr User Pedrosstoj. The Future The future of cryptocurrencies is bright. Governments have begun to adopt and utilize blockchain technology in order to apply it to areas like healthcare records, social security verification, and taxation. Governments are already starting to pay in cryptocurrency for government services, and in other cases, they will be able to integrate blockchains into their payments to increase efficiency. Here are some of the common issues that blockchain technology can address: Trust. The blockchain cannot rely on a centralized resource or network to verify transactions. It does not have a reputation to protect or fail. Fraud. The blockchain can protect against fraudulent individuals. It cannot guarantee transaction integrity. Identity. The blockchain can safeguard identity and

personal data. Third-party business listings can be verified. Invoicing. The blockchain can verify the a681f4349e

Q: Create ServiceStack client with constructor injection on multiple instances I have an.asmx Web Service written in C# and created using ServiceStack. If I create a service client (a MyServiceClient) on a singleton scenerio I'm fine, but if I create a client that needs to be used on multiple instances I get a null reference exception. I've tried to create the client manually with the constructor injection; but it looks like there is something missing. Do I have to register the used class as Dependency Injection on MyServiceClient class? I've tried that but I don't know if I missed something. MyServiceClient client; client = new MyServiceClient(""); client.MyMethod(); This is the constructor for MyServiceClient: public MyServiceClient(string uri) { _textService = new TextServiceClient(uri); ... } The TextServiceClient is another class. A: What do you get for the exception message? Have you already checked which uri you are using in the client, and if it is null, that might be the reason for the exception. As for your question about DI for the client; I have successfully used DI with ServiceStack in the following way: AppHost: public class AppHost : AppHostBase { public AppHost() : base("My App", typeof(MyService).Assembly) { Plugins.Add(new TextServiceFeature()); // Set the breakpoint here to check for an null uri Console.WriteLine("In AppHost constructor"); } public override void Configure(Funq.Container container) { Container = container; string uri = ConfigurationManager.AppSettings["MyTextServiceUri"]; container.Register(() => new MyServiceClient(uri)); } } MyServiceClient: public class MyServiceClient : ClientBase, IT

April 17, 2012 I have a daschund and I'm feeling totally fed up with her attitude so I was on the phone to the spay/neuter clinic this week and the woman who answered asked me for her age, breed, reason for getting sterilized and the sex of the dog. Her response when I told her "I'd like to spay and neuter the dog but I want to do it on the spot" was "Why don't you wait till she's a year old and she'll be easier and she will get a nicer temperment". I was really in pain at this point and I said "I'd really like to spay and neuter her but the condition that she is in makes it impossible, and I'm just not getting anywhere with her". At this point she said that it's a very difficult decision to make and there's no hard and fast rule as to when a dog should be spayed/neutered. I really don't know where to turn next. My heart tells me to spay and neuter her, but it also tells me that my time would be better spent keeping her happy and healthy. I'm just beginning to understand the concept of spaying and neutering my dog, and while I'm sure it's the right thing to do, I'm a little confused. I found on another thread that on-the-spot spay/neuter is a no-no for dogs under 5.5 months old, but I'm 4 months and 8 weeks. The vet says that it's unnecessary for my daschund at this age. I would really appreciate any advice/advice you can give me. The best way to spay a dog is with anesthesia but at your age you would want to have the surgery done by a vet who does it all the time. I was 5 1/2 years old when I got my first dog and I was a little nervous about having surgery. A little
