(PSA-DiagBox V783 819 Multilanguage) + (Download Diagbox V783 819 Multilanguage)? - diagbox v7.83 819 multilanguage...Q: How to use std::any I need to use pointer to any as a result of bitwise function, I can't use std::any because it only use for compile time type, so the compiler cant use RTTI. I can use a type of pointer to any, but how do I use any?

```
enum E {a}; std::any b; int f(E e) { return e; } int main(void) { f(a); }
```

This code compile error: expected identifier or '(' before '(' token When I declare b as const any * b; Error: declaration of 'b' as array of incomplete type 'const any*' How to use std::any? A: To use std::any, you should first declare the required type. What type are you declaring as std::any? enum E
