These efforts result in the safe and reliable production of more than eight million gallons of high-grade nuclear fuel each year for the U.S. nuclear deterrent and provide a variety of services to domestic government and commercial users of nuclear energy. The Los Alamos Laboratory produces, maintains and operates the world's most advanced nuclear weapons and nuclear material assembly facility. The Laboratory's Radiation Safety Division provides for the safe and ethical operation of the Laboratory's radiation and nuclear fuel facilities and processes. In addition, the RadLab helps prepare the Laboratory for accountability by maintaining a Radiation Safety Program including, among other activities, a Radiation-induced Cancer Registry (RICOR).Scoring charts are used throughout the sports world to help players more effectively compete. In basketball, for example, players are given numerical scores according to performance. These scoring charts may provide a single score to give a team a total, a range for the team's score, or other information. Scoring charts also are used to indicate that a given game or event is won or lost. For example, in baseball, a game is generally played until a team scores a run or more runs. When a team reaches two or more runs, the game is said to be tied or f30f4ceada
