## What's New In?

Active Takeoff is an easy-to-use, highly customizable, 2D Drafting/CAD Construction software, which enables you to create any kind of 2D document with accuracy and convenience. No prior knowledge of technical CAD drafting is required. The software generates the project reports with individual elements separated from each other. There is no need to choose the worksheets in advance. On the contrary, the software automatically names the worksheets in accordance with the elements on the left side of the screen and you are not limited to any number of worksheets. The software includes a powerful set of features such as “Takeoff” (measurements), “Design” (visualization), “Landscape” (creation of room/area/building) and “Landmark” (creation of points of interest on the map). You can add to the set of objects up to 3-500, sort them into any folders and name them with incremental numbers and finally you can export them to Excel, PDF or XML format. The follow-up to the hit Microsoft Office suite, Visio 2013 is a significant update to the best-selling visualization and collaboration software package on the planet.
